

Are we accurately estimating the potential role of pollution in the decline of species at risk in Canada?

Supplementary Material 4: ANOVA and Tukey's post-hoc test for differences between taxonomic groups in Threats Calculator scope (scope_{TC}) of pollution (pollution overall and each category separately).

Table S4a. Analysis of Variance Table for effect of taxonomic group on assessed scope of pollution as a whole

	degrees of freedom	sum of squares	mean square	F value	p(>F)
taxonomic group	9	27011	3001.21	3.1955	0.001957
residuals	99	92980	939.19		

Table S4b. Results of Tukey's post-hoc pairwise comparison of means, with Bonferroni correction, for differences between taxonomic groups in the assessed scope of pollution (all categories). Pairs with significant differences ($\text{Pr}(>|t|) < 0.05$) are bold.

comparison	Estimate	Std. Error	t value	Pr(> t)

Figure S4f: Assessed scope of pollution category 9.6 – *Excess Energy*, by taxonomic group

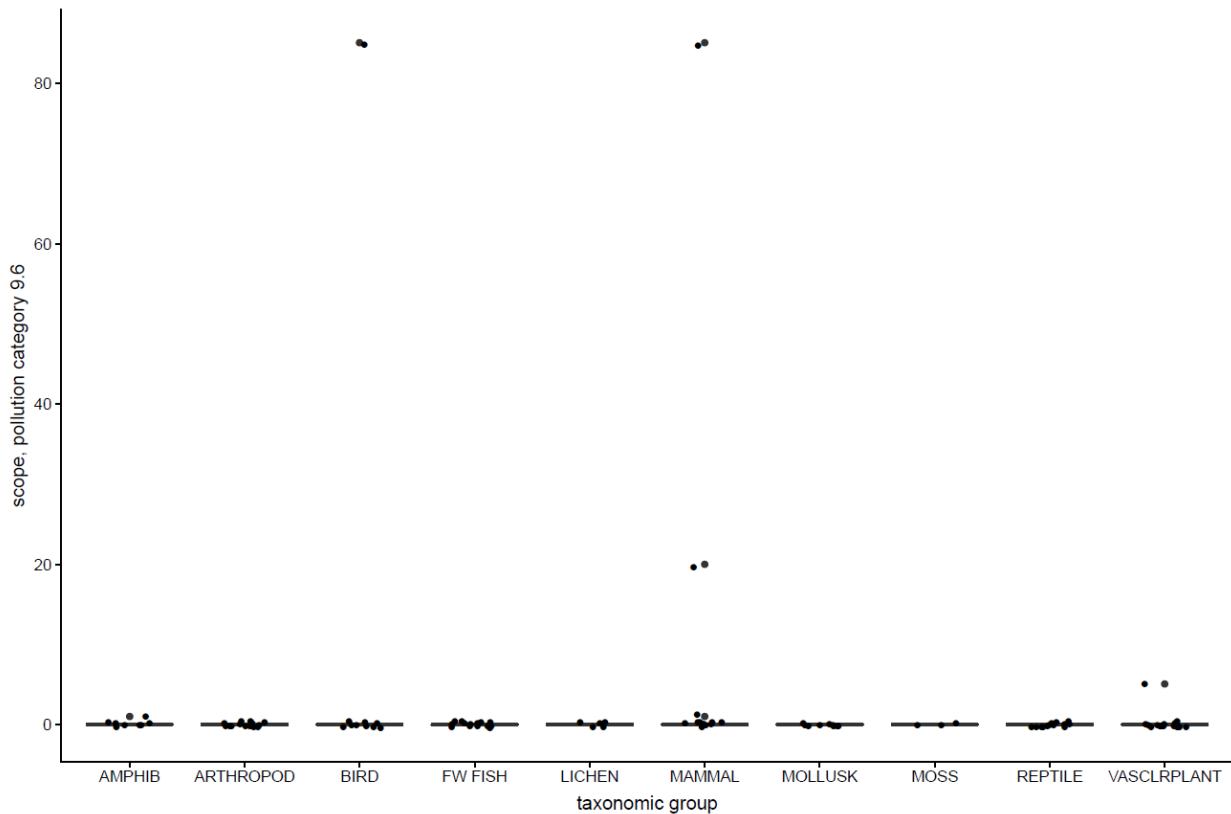

Table S4l. Analysis of Variance Table for effect of taxonomic group on assessed scope of pollution category 9.6

	degrees of freedom	sum of squares	mean square	F value	p(>F)
taxonomic group	9	1232.4	136.93	1.0201	0.4294
residuals	99	13288.6	134.23		

Table S4m. Results of Tukey's post-hoc pairwise comparison of means, with Bonferroni correction, for differences between taxonomic groups in the scope of pollution category 9.6.

Pairs with significant differences ($\text{Pr}(>|t|) < 0.05$) are bold.

comparison	Estimate	Std. Error	t value	$\text{Pr}(> t)$
